DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see Remarks, filed 21 July 2008, with respect to the prior art rejections of the claims have been fully considered and are persuasive. The prior art rejections of the claims have been withdrawn. Further, Examiner has found no additional prior art which would anticipate the claims and/or render the claims obvious to one of ordinary skill in the art at the time of the invention.

Allowable Subject Matter

2. Claims 1-3, 7, 17-19, 23-26 and 30 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 1 recites a process whereby a database is provided which includes a spot color name associated with a corresponding image data that simulates printing media. When a print job is received, the page description language (pdl) code contains a reference to the spot color name, which is used to retrieve the corresponding image data, add said image data to the pdl code as a Postscript pattern, the pattern including a repeating unit so that the image data is repeated throughout the printed document image. The pdl code is then executed, and the appropriate printed output is generated.

Claim 1 is advantageous since it allows simulations of various print media textures on common print stock. By storing the texture in the database and referencing the texture when the pdl code is received, the printing is performed efficiently. Examiner has not discovered prior art which fully teaches the limitations recited in claim 1. The previously cited reference Ringness (US-6,456,395 B1) does not disclose that the image data corresponding to the spot color name simulates printing media, nor does Ringness teach that the Postscript pattern comprises a repeating unit. Other related prior art includes Weder (US-6,510,650 B1) which teaches printing a background pattern simulating the appearance of cloth or paper. However, Weder does not teach tiling or otherwise repetitiously printing the background pattern. Examiner has found no combination of prior art references which would have reasonably suggested all the elements of claim 1 to one of ordinary skill in the art at the time of the invention, including (1) the spot color/image data database access *via* finding the spot color name in the code, (2) adding code to the pdl code which will cause a repetitious printing of the image data, and (3) the image data so printed simulates printing media. Thus, claim 1 is deemed allowable over the prior art.

Art Unit: 2625

Claims 2, 3 and 7 depend from claim 1, and are therefore deemed allowable over the prior art at least due to their respective dependencies from claim 1.

Claim 17 is an apparatus which performs the process recited in claim 1. Therefore, claim 17 is deemed allowable for reasons similar to those given for claim 1.

Claims 18, 19 and 23 depend from claim 17, and are therefore deemed allowable over the prior art at least due to their respective dependencies from claim 17.

Claim 24 recites a program storage medium readable by a computer which tangibly embodies a program of instructions executable by a computer to perform the method recited in claim 1. Therefore, claim 24 is deemed allowable for reasons similar to those given for claim 1.

Claims 25, 26 and 30 depend from claim 24, and are therefore deemed allowable over the prior art at least due to their respective dependencies from claim 24.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
